SKILLS

- Unity 3D Engine
- C# Scripting
- Virtual Reality (Meta / Oculus SDK)
- Augmented Reality (ARCore, Vuforia, MaxstAR)
- WebGL / Browser 3D
- Unity UI System & UI Animation
- Interaction & Level Design
- Gameplay Scripting
- Optimization & Debugging
- Cross-Platform (Mobile · PC · VR)
- Version Control (Git)
- Visual Studio

PLATFORMS

- Oculus Quest 2 / 3
- PCVR
- Android
- WebGL / Browser

LANGUAGES

- Tamil
- English

SUMMARY

- XR Developer specializing in Unity, crafting immersive VR, AR, MR and WebGL experiences for arcades, brands, and startups across mobile and PCVR platforms.
- Hands-on experience shipping VR games, AR applications, MR experience and WebGL platforms across Oculus Quest, PCVR, and Android.
- Owns the full development pipeline — interaction design, UI/UX, animation systems, level design, and performance optimization.

WORK EXPERIENCE

XR / Unity 3D Developer

Virtilens · August 2019 - Present · Chennai

- Design, develop, debug, and test immersive VR, AR, MR and WebGL experiences end-to-end in Unity.
- Built VR experiences for Oculus Quest and PCVR using the Meta / Oculus SDK and XR Toolkit.
- Developed AR applications — image tracking, plane detection, and 3D overlays.
- Delivered interactive WebGL 3D platforms with live React-driven backend integration.
- Led game and level design, UI/UX, and animation systems to create engaging player experiences.
- Handled performance optimization, profiling, and bug fixing for smooth cross-platform builds.

PROJECTS

ImmerseHome 3D VR PCVR · Oculus Quest

Interactive VR architecture walkthrough where users explore a full-scale modern home, move via smooth locomotion and teleportation, customize interiors in real time (floors, walls, false ceilings), and grab and reposition objects naturally — replacing static renders with a living, explorable space for client demos.

Role: Lead VR Developer — interaction systems, gameplay & logic, VR UI, optimization.
Tech: Unity · Meta SDK · C#.

Jurassic Plank VR PCVR · Oculus

Cinematic VR survival adventure set in a living Jurassic world across four stages — an aerial helicopter safari, a high-speed mountain escape with VR combat, an underwater predator encounter, and a real-world plank challenge that syncs physical movement with virtual height. Focused on realistic scale, environmental storytelling, and genuine fear response.

Role: Gameplay programming, VR interaction, UI development, scene flow, optimization.
Tech: Unity · Meta SDK · C#.

The AnatoMind VR Meta Quest

Educational VR anatomy application that lets users explore detailed 3D anatomical structures hands-on with VR controllers, building spatial understanding of the human body. Designed for medical and educational environments, turning traditional study into an intuitive, exploration-driven experience.

Role: Lead VR Developer — full pipeline, interaction design, UI/UX, optimization.
Tech: Unity · Meta SDK · C#.

Boo Bangala VR Meta Quest · PCVR

Psychological VR horror experience driven by atmosphere, spatial audio, and unpredictability rather than combat. Ships with two modes — an intense Adult Mode built on suspense and dynamic jump scares, and a lighter cartoon-style Child Mode with safe, playful surprises.

Role: Lead VR Developer — full pipeline, interaction design, gameplay logic, optimization.
Tech: Unity · Meta SDK · C#.

V20 Cricket VR Meta Quest · PCVR

Immersive VR cricket experience that recreates a real stadium — players step onto the pitch with realistic visuals, spatial crowd ambience, and a smooth animated VR interface.

Role: Animation integration, interactive UI, UI animation, optimization, debugging.
Tech: Unity · Meta SDK · C#.

Zombie Fury VR VR Meta Quest · PCVR

High-intensity 360° wave-based VR zombie survival shooter across two contrasting environments — an exposed open desert and a claustrophobic ruined city — with realistic gun handling, reloading, haptic feedback, and a progressive difficulty system.

Role: Gun mechanics, combat & gameplay, level design, VR UI, VFX, optimization.
Tech: Unity · Meta SDK · C#.

Zombie Fury MR MR Meta Quest

Immersive Mixed Reality zombie shooter that blends the virtual world with the player's real-world surroundings. Players use their gun to shoot and destroy virtual walls, revealing a hidden zombie world behind the physical environment. As the world breaks through the real surroundings, zombies emerge and attack from different directions — players shoot and eliminate incoming zombies while experiencing the thrill of virtual enemies appearing as if they are physically present in their real room.

Role: Gameplay, level design, Gun Mechanics.
Tech: Unity · Meta SDK · C#.

Turbo Tracks VR VR Meta Quest · PCVR

Cinematic VR roller coaster across two worlds — a frozen landscape of snowy mountains and ice caves, and a rugged prehistoric world of giant dinosaurs — with steep drops, sharp turns, and comfort-focused motion design ideal for VR arcades.

Role: Lead VR Developer — full pipeline, ride systems, environment integration, optimization.
Tech: Unity · Meta SDK · C#.

Delivery Dash VR VR Meta Quest · PCVR

Immersive VR food-delivery rider simulation — responsive VR bike riding, hand-grab and socket-based inventory, and a dynamic city with NPC traffic and working signals. A performance-monitoring system tracks over speeding, collisions, and violations, delivering a post-run rating for replayability.

Role: VR gameplay, bike & hand interaction, delivery logic, UI/UX, traffic systems, player scoring.
Tech: Unity · Meta SDK · C#.

WareHouse 3D WEBGL WebGL · Browser

Real-time WebGL platform rendering a dynamic 3D warehouse in the browser. Every object and data point updates live from a React-based backend API, wrapped in a clean animated UI — turning live operational data into an interactive 3D operations view.

Role: Lead Developer — full pipeline, interaction design, Unity - React integration.
Tech: Unity · WebGL · C#.

AR Home AR Android

Augmented reality app that places detailed full-scale 3D home models onto real-world surfaces using plane detection and surface tracking. Users rotate, reposition, pan, and zoom to inspect layouts from any angle, helping clients understand spatial design far better than static renders.

Role: Lead AR Developer — full pipeline, AR interaction, UI/UX, optimization.
Tech: Unity · ARCore · C#.

AR Xmas AR Android

Augmented reality app that transforms static printed visuals into interactive experiences through real-time image tracking — overlaying animated 3D content and video onto recognized targets, with multi-image recognition and voice-command interaction.

Role: Lead AR Developer — AR workflow, interaction systems, UI design, optimization.
Tech: Unity · MaxstAR SDK · C#.

2D Warrior GAME Android

A fast-paced 2D adventure platformer with interactive gameplay, visuals, level design, and satisfying game feel across levels.

Role: Gameplay, level design, UI design.
Tech: Unity · C# · 2D.

EDUCATION

BSc, Computer Science
Hindustan College of Arts and Science · 2016 — 2019
